

# MixedFLOW™ IMPELLERS

The king of mixing blades is designed to provide safe and efficient liquid mixing. The impeller embodies patented features obtainable in no other stirring device.

## Features:

- A** The flowing design of the blade pitch creates a self centering action
- B** Thorough mixing with minimum addition of air
- C** Ideal distribution of suspended material
- D** Forces solids off the bottom with minimum swirl and vortex
- E** Creates consistent interaction of material

MixedFLOW™ Impellers are available in two (2) designs... low pitch and high pitch. As a rule, use low pitch for low to medium viscosity liquids and high pitch for medium to high viscosity liquids. See page 19 for complete selection.
